FAIR for Photon and Neutron User Facilities

Promise of even higher scientific/societal impact

Keys metrics of a scientific User Facility :

- Nb of scientific proposals submitted (attractiveness)
- Nb and IF of scientific articles published using the experimental data (impact measurement).

Professional management of the production, like any other company

Better services for the facility users:

- Data are organized and easily accessible at any time
- Metadata are standardized and structured
- Easily citeable - Some journals request access to data for every article or for referees.
- Facilitate Data Management Plan

KPIs - Before PaNOSC - 2018

Current status

How many ILL users' publications are referencing data DOIs

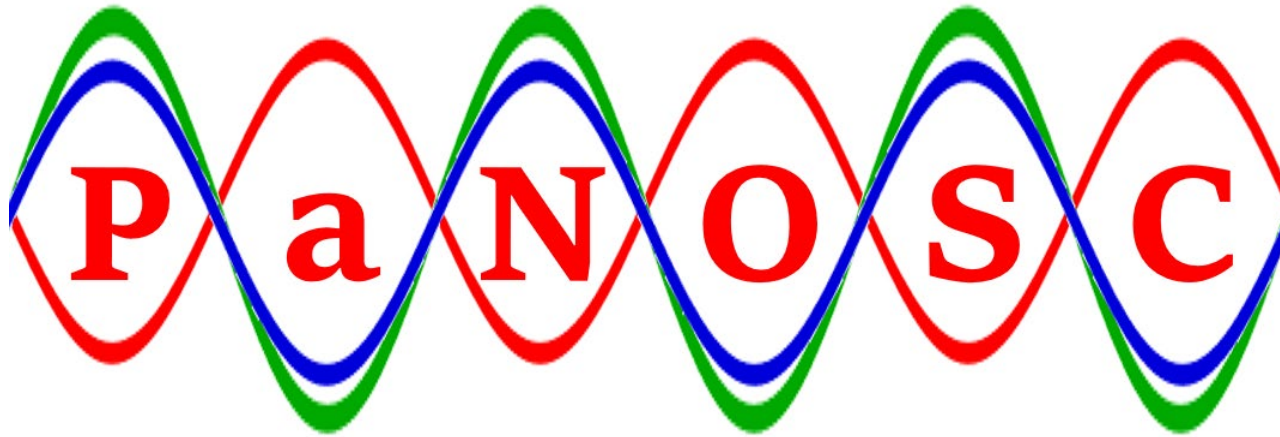

- User adoption in progress, but still slow to come.
- Concepts still new for a large number of scientists.
- Metrics: how successful are we?
- Rewarding ?
- EOSC critical mass

Actions regarding FAIR data, need for collaborations

- Update our community Data Policy Framework (PaNData 2008)
 - Compare with latest FAIR principles
 - Take into account new services
 - ...
- Implement standard API on our data catalogue and federated search on (meta)data
- Extend NeXus metadata standards to enhance interoperability.
- Implement DMP template (provide users with an easy way to fill in DMPs)
- Continue to complete metadata environment (e-logbook, samples information, ...)
- Promoting FAIR data culture, train scientists on how to create and use FAIR data.
- Setting clear and open metrics.

Photon and Neutron Open Science Cloud
